

Seelam Avinash Reddy

Bhopal, Madhya Pradesh | +91 8919689676 | Email: avinashreddy112295@gmail.com | LinkedIn: <https://www.linkedin.com/in/avinash-reddy-139380273/> | GitHub: <https://github.com/Avinash3625>

Professional Summary

Aspiring AI / Machine Learning Engineer (B.Tech, AI & ML) with hands-on experience in supervised learning, NLP, computer vision, model evaluation and deployment. Practical experience building end-to-end pipelines (data preprocessing, feature engineering, model training, validation, and demo deployment). Familiar with MLOps concepts and Agentic AI workflows. Seeking entry-level AI/ML/DS roles focused on building production-ready models and data-driven products.

Education

Bachelor of Technology (Computer Science & Engineering - AI & ML) Vellore Institute of Technology - CGPA: 7.12/10 | Aug 2021 - Jun 2025

Higher Secondary (Class 12) Delhi Public School, Vijayawada - 76.80%

Secondary (Class 10) Delhi Public School, Vijayawada - 56.30%

Technical Skills

Python | scikit-learn | NLP (NLTK, TF-IDF) | Streamlit | Flask | Pandas | NumPy | Machine Learning | Computer Vision (OpenCV concepts) | Matplotlib/Seaborn | Git | SQL | Model deployment concepts | Agentic AI | MLOps concepts | Feature engineering | Model evaluation

Experience

Machine Learning Intern - SmartInternz | Sep 1, 2025 - Oct 10, 2025

- Developed 'Anemia Sense', an ML diagnostic pipeline for anemia detection using clinical biomarkers (hemoglobin, RBC, etc.).
- Built data preprocessing pipeline (missing-value handling, normalization, feature selection) and train/test splits.
- Compared and tuned classification models (Logistic Regression, Random Forest, SVM); evaluated using accuracy, precision, recall, F1, and ROC/AUC.
- Packaged a demo app (app.py) for model inference; saved trained model (model.pkl) and published code and artifacts on GitHub: github.com/Avinash3625/Anemia-Sense

Machine Learning Intern - EDUNET Foundation | Dec 2024 - Jan 2025

- Built an SMS spam-detection pipeline using NLP preprocessing (tokenization, normalization) and TF-IDF feature engineering.
- Developed and tuned SVM and Multinomial Naive Bayes classifiers with scikit-learn; evaluated using precision, recall and F1-score and achieved ~90% accuracy.
- Addressed class imbalance and applied hyperparameter tuning with cross-validation to improve model robustness.
- Packaged a Streamlit demo for stakeholders and documented methodology and evaluation to support deployment decisions.
- Project GitHub: <https://github.com/Avinash3625/SMS-Spam-Detection>

Projects

Finding Water Index Value using ML - Oct 2022

- Developed a multi-output regression approach for water quality and availability. Used explainable AI (SHAP/LIME) to surface key features and implemented anomaly detection for early warnings.

Farm Management using Drones (CV & ML) - Mar 2024

- Designed a drone-based monitoring prototype leveraging computer vision to identify crop stress, enabling targeted interventions and efficient resource allocation.

Music Recommendation System - Jul 2024

- Implemented a hybrid recommendation system combining collaborative filtering and content-based methods to improve relevance. Addressed cold-start with demographic signals and integrated contextual inputs (time, mood).

SMS Spam Detection - Dec 2024

- Built an SMS spam detection pipeline using NLP preprocessing and TF-IDF feature engineering; trained SVM and Multinomial Naive Bayes classifiers and evaluated using precision, recall, and F1. GitHub: <https://github.com/Avinash3625/SMS-Spam-Detection>

Anemia Sense - Sep 2025

- Designed a clinical ML pipeline for early anemia detection using blood biomarkers; trained and compared Logistic Regression, Random Forest, and SVM models. Built a demo inference app and published code & model: github.com/Avinash3625/Anemia-Sense

Certifications

Introduction to SQL (Kaggle) | Introduction to Artificial Intelligence (Coursera)

Languages & Interests

Languages: English, Telugu | Interests: web technologies, Android updates, coding challenges
